

# **Global Solid Waste Technology Alliance (GSWTA)**

## **– Manifesto**

**Only real technology can solve the solid waste crisis.**

### **I. Our Positioning**

The Global Solid Waste Technology Alliance (GSWTA) is an independent technological force operating vertically under the framework of relevant United Nations bodies.

- No reliance on donations
- No reliance on government subsidies
- Solving problems through technology and market mechanisms

### **II. Our Approach**

We work directly with enterprises to solve their solid waste problems.

Using carbon credits as our source of funding, we eliminate solid waste while simultaneously improving the living conditions of the 3 billion people living in inadequate housing.

The carbon credit payments from Fortune 500 companies are the driving force that will restore order to a chaotic solid waste landscape.

**We do not tell stories. We do not fundraise. We do not depend on public goodwill.**

**We act. We use real technology to solve real problems.**

### **III. Our Partnership Mechanism**

The United Nations serves as the coordinator between our alliance and Fortune 500 enterprises. All our operations will comply with relevant UN regulations and frameworks.

## **IV. Call for Members**

We welcome all researchers and innovators who possess genuine solid waste treatment technology to join us.

## **V. A Historic Window**

The solid waste crisis has reached a tipping point. The housing crisis facing 3 billion people can no longer be ignored.

**The technology is ready.**

**The market is ready.**

**What is needed now is for those with the real ability to solve these problems to step forward.**
